Engineer

Careers

Roles and independent partnerships with Engineer ApS: relevant experience, delivery responsibilities and how to start a conversation.

Engineer ApS is a founder-led engineering consultancy in Copenhagen. We discuss roles and independent partnerships against a defined delivery need, with clear responsibilities and working arrangements.

Take responsibility for useful work

Good engineering needs people who can own decisions. We work on software, data and infrastructure with responsibilities made clear.

Understand the work we take on

Read the work to understand the problems we take on. The stack and ways of working show the context in which we make decisions.

Cases Get in touch →

The work we value

Production experience, sound judgement and the ability to explain a decision matter here. Show what you have built, how you have operated it and what you learned. Degrees and certifications provide context alongside that evidence. Our work covers platforms and backend systems, data and databases, cloud, DevOps and business IT. The portfolio and tech stack show the relevant experience.

How we work together

The people named in an engagement do the work and communicate directly about it. Testing, security, documentation and handover belong in the delivery scope. Responsibilities, availability, location, hours and pay are discussed for the specific role or partnership. Our commercial basis describes what the company charges.

We ask for judgement, **so we hand over the decisions** that need it.

Seniority that still has to ask permission is a title rather than a job.

Start with your experience

Write to welcome@engineer.company with examples of your work and the kind of contribution you are interested in. Independent specialists can use the same route for potential collaboration. A conversation establishes whether the work and the arrangements fit both sides.

You can follow the published engineering work and notes through RSS, Atom or JSON Feed.

Tell us about your experience.

You would own the work, **talk to the client** and decide how it is done.

There is no layer between an engineer here and the person whose problem it is.

Tell us what you have built How the work is done →

Show how you make decisions

Tell us what you build, what you want to take responsibility for and which examples show your judgement.

See what it costs Get in touch →

Talk about working together

Write about the work you would like to do together. A specific example is more useful than a list of tools.
