Engineer

Install as app

Add engineer.company to your home screen or dock as an app — no store, no account, no app package to download.

This site can be installed as an app. There is no app store involved, no account to make and no package to download: your browser gives the pages it already fetches their own icon and an app-style window with fewer browser controls.

Every browser hides the button somewhere different, and Apple's never offers it by itself — which is the only reason this page exists.

Make a return visit straightforward

Give repeat visitors a direct, predictable way to reach a useful service.

Understand the installed experience

Examine the install behaviour and what the application offers once opened.

Cases Get in touch →

On an iPhone or iPad

Open the site in Safari, tap the **Share** button, scroll down and choose **Add to Home Screen**. From iOS 16.4 onwards the same option appears in Chrome, Edge and Firefox. iOS will never suggest this on its own, on any browser.

On Android

In Chrome, open the browser menu and choose **Install app** — some versions call it **Add to Home screen**, and some offer it as a strip along the bottom of the page. Firefox and Samsung Internet have the same entry under their own menus.

On a computer

In Chrome, Edge, Brave, Opera or Vivaldi, look for the small **install icon at the right-hand end of the address bar**. If it is not showing, the browser menu has the same command, usually near “Cast, save and share” or “Apps”.

In Safari on macOS Sonoma or later, use **File → Add to Dock**.

Firefox on Windows can add sites to their own web-app windows through the web apps button in the address bar, from version 143, or version 150 for Microsoft Store installations. Mozilla’s implementation documentation lists Linux support as disabled by default and macOS support as unavailable.

What you get, and what you do not

You get an icon, a window of its own, and a site that opens in one tap instead of three. The site adds no background work on your device: no background process, no notifications, no permissions to grant, nothing asking to start when you log in.

Installation gives this site its own window. It does not create a managed offline copy. This site publishes no JavaScript and installs no service worker, background process or script-managed storage — you can read what that buys you on the privacy page. The installed app needs a connection for normal use, exactly like the page you are reading now.

Remove it through the browser’s app controls or the operating system’s app removal command. In Firefox on Windows, move the last web-app window back into Firefox to uninstall it; unpinning its taskbar icon alone does not remove its Start-menu shortcut. This site has installed no service worker or script-managed offline storage.

And if what you would rather have installed is something of your own, talk to us.

Begin with the recurring task

Start with the repeat task, supported devices and the experience your users need.
