Engineer

The site in numbers

A few measured facts about engineer.company: achievements, languages, words, frequent vocabulary and reading-time estimates from the source tree.

A small census of the website, with a few excuses to count things. These are facts about the source tree, not visitor analytics.

These figures are generated from the main site’s source before focused addresses select their own work. Word totals cover review bodies only, so statistics pages add no words to those totals.

What is in the tree

344

Estimated printed pages

179

Estimated paper stack, millimetres

17.9

Estimated book-length equivalents

0.6

Estimated eight-hour days reading aloud

0.7

Estimates use 220 words/min silently, 130 aloud, 250 words/page and 0.1 mm per sheet. Each page uses one sheet; these are comparisons, not measured reading or print times.

For scale, one book means 80,000 words and one reading day means 8 hours. Fractions are rounded to one decimal; neither comparison describes a published book or a real reading session.

Links count each achievement–tag pair once in the reference language. Service coverage divides services with linked work by all catalogue services; linked work is not independent validation. Translation coverage matches reference records by stable identifiers across every built language. Year endpoints describe recorded work, not uninterrupted employment or the company's age.

Reference language: en. Words are Unicode letter sequences in review bodies, after removing Markdown link destinations, HTML tags and shortcode syntax. Hyphenated compounds count as one word. Numbers do not count as words.

A few particular favourites

The longest reference-language review

Published a readable Tor onion mirror — 509 words

The service with the most linked achievements

DevOps & CI/CD Automation — 43 linked achievements

75

run
68

Counts use only published review bodies in this page's language. Word boundaries follow that language; a language-specific filter removes common words, and different word forms are counted separately.

Most common phrases

6

These sequences of two or three consecutive words occur at least twice. Each sequence stays within a sentence and starts and ends with a word retained by the filter. Overlapping occurrences count.

Measure to answer a question that matters

Use measurable facts to examine the engineering behind a service.
